Tushar Gangurde

Nashik, Maharashtra | tushargangurde859@gmail.com | 7057478362 | Leetcode | GFG | Linkedin | Github | Portfolio

Education

Chandigarh University, B.E. in Computer Science — Nov 2021 – Jun 2025

- CGPA: 8.61 /10.0

Experience

Associate Software Engineer | BNP Paribas – Mumbai, IN — Aug 2025 – Present

- Spearheading the migration of a legacy WPF-based application to Angular CLI, enhancing scalability, maintainability, and delivering a modernized UI experience for 2,000+ users.
- Implementing end-to-end deployment pipelines using CI/CD tools (Jenkins, GitHub Actions), automating release cycles.

IT Intern | BNP Paribas – Mumbai, IN — Feb 2025 – Aug 2025

- Automated sanity checks using Python and Selenium, reducing 4 hours of manual QA effort weekly and improving test reliability through data-driven health monitoring.
- Created a real-time health check dashboard using React.js, enabling engineering teams to monitor critical business metrics and detect anomalies promptly.

Projects

Future of Retail(EngageCart) — Link

- Designed a seamless in-store navigation system that minimizes pickup delays and elevates customer engagement through features like virtual try-ons, geo-targeted reminders, and mood-based recommendations, leading to a 20 percent increase in overall customer engagement time.
- Developed a voice-enabled interface for visually impaired users, enhancing inclusivity and increasing user satisfaction by 40 percent.
- Engineered an integrated e-commerce web platform combining online and in-store experiences using HTML, CSS, JavaScript, and MySQL.

Enhancing Flight Navigation Mechanism for Optimal Route Planning and Risk Mitigation — Live Link [GitHub]

- Architected an advanced flight navigation system using A* pathfinding algorithm and real-time weather data integration, resulting in 15 percent improved route efficiency and 25 percent reduction in weather-related delays through intelligent risk assessment and dynamic route recalculation.
- Developed a mission-critical route optimization engine processing 1000+ weather data points per route, achieving 98 percent route safety compliance while reducing average flight duration by 12 percent through implementation of advanced risk assessment algorithms and real-time weather condition monitoring.
- Tools Used: React, JavaScript, MySQL, OpenWeatherMap API

Weather Monitoring System — Live Link [GitHub]

- Engineered a React-JavaScript weather monitoring system serving 1,000+ monthly users, leveraging OpenWeatherMap API for real-time updates across 100+ Indian cities with 99.9 percent uptime and sub-500ms response times.
- Implemented city comparison analytics and weather alert system using Redux state management, reducing user navigation time by 40 percent and increasing user engagement through personalized weather notifications with 85 percent opt-in rate.
- Tools Used: React, JavaScript and OpenWeatherMap API

Skills

Programming Languages: C++, Java, JavaScript
Technologies: HTML, CSS, ReactJS, API
Database Management: MySQL, MongoDB
Monitoring & Observability: Grafana, Dynatrace
DevOps Tools: Docker, Kubernetes
Version Control: Git, GitHub
Operating System: Windows, Linux
Service Management: ServiceNow, Jira

Research Publications

College Management System Using Blockchain (DOI: 10.1109/ICIIP61524.2023.10537672) — Nov 2023

- Published a comprehensive review paper on using blockchain technology to enhance administrative operations in educational institutions by 20%, emphasizing its potential to improve security, transparency, and the management of immutable academic records.

Achivements and Ratings

- Leetcode Max Rating: 1858 (Top 5.65 percent globally)
- GFG Institute rank: 21 (Max Rating: 1847)
- Top 1 IITM's NPTEL Exam in Probability and Statistic
- 2nd Runner up in Chase the Code
- Top 3: Inter-Department Coding Competition
- HACKNSUT '23 and Airbus Aerothon 6.0 finalist '24
